

# Администрирование сетевых подсистем

Лабораторная работа №1

---

Авдадаев Джамал Геланиевич

25 ноября 2025

Российский университет дружбы народов, Москва, Россия

## Цели и задачи работы

---

## Цель лабораторной работы

---

Приобретение практических навыков подготовки стенда Rocky Linux, автоматизации установки и развёртывания виртуальных машин с помощью Packer и Vagrant.

## Ход выполнения

---

# Установка плагинов Vagrant

```
C:\work\dgavdadaev\vagrant>vagrant plugin install --plugin-clean-sources --plugin-source https://rubygems.org vagrant-vbguest
Installing the 'vagrant-vbguest' plugin. This can take a few minutes...
Fetching micromachine-3.0.0.gem
Fetching vagrant-vbguest-0.32.0.gem
Installed the plugin 'vagrant-vbguest (0.32.0)'!
C:\work\dgavdadaev\vagrant>
```

Рис. 1: Установка vagrant-vbguest

## Добавление box-образа

```
C:\work\dgavdadaev\vagrant>vagrant box add rockylinux10 vagrant-virtualbox-rockylinux10-x86_64.box
=> box: Box file was not detected as metadata. Adding it directly...
=> box: Adding box 'rockylinux10' (v0) for provider: (amd64)
  box: Unpacking necessary files from: file:///C:/work/dgavdadaev/vagrant/vagrant-virtualbox-rockylinux10-x86_64.box
E:   box:
=> box: Successfully added box 'rockylinux10' (v0) for '(amd64)'!

C:\work\dgavdadaev\vagrant>
```

## Настройка provisioning: hostname

```
1  #!/bin/bash
2
3  username=dgavdadaev
4
5  hostnamectl set-hostname "${HOSTNAME%%.*}.${username}.net"
6
7
8
```

Рис. 3: Скрипт изменения hostname

## Настройка provisioning: создание пользователя

```
1  #!/bin/bash
2
3  echo "Provisioning script $0"
4
5  username=dgavdadaev
6  userpassword=123456
7
8  encpassword=`openssl passwd -1 ${userpassword}`
9
10 id -u $username
11 if [[ $? == 0 ]]
12 then
13     adduser -G wheel -p ${encpassword} ${username}
14     homedir=`getent passwd ${username} | cut -d: -f6`
15     echo "export PS1='[\u@\H \w]\$\'" >> ${homedir}/.bashrc
16 fi
17
18
19
```

## Подключение provisioning в Vagrantfile

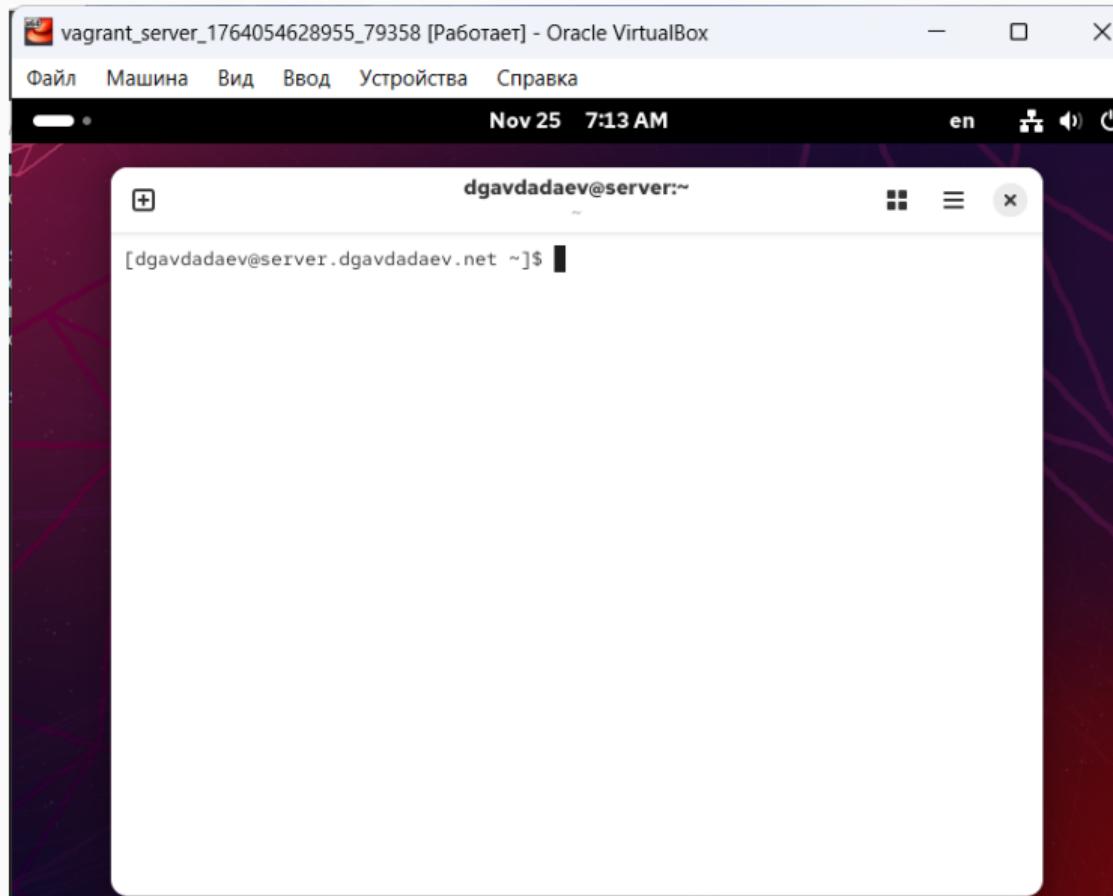

```
37      end
38
39      ## Common configuration
40      config.vm.provision "common dummy",
41          type: "shell",
42          preserve_order: true,
43          path: "provision/default/01-dummy.sh"
44
45      config.vm.provision "common hostname",
46          type: "shell",
47          preserve_order: true,
48          run: "always",
49          path: "provision/default/01-hostname.sh"
50
51      config.vm.provision "common user",
52          type: "shell",
53          preserve_order: true,
54          path: "provision/default/01-user.sh"
55
56      ## Common configuration
```

## Запуск виртуальной машины Server

```
C:\work\dgavdadaev\vagrant>vagrant up server
Bringing machine 'server' up with 'virtualbox' provider...
==> server: You assigned a static IP ending in ".1" or ":1" to this machine.
==> server: This is very often used by the router and can cause the
==> server: network to not work properly. If the network doesn't work
==> server: properly, try changing this IP.
==> server: Preparing master VM for linked clones...
    server: This is a one time operation. Once the master VM is prepared,
    server: it will be used as a base for linked clones, making the creation
    server: of new VMs take milliseconds on a modern system.
==> server: Importing base box 'rockylinux10'...
==> server: Cloning VM...
==> server: Matching MAC address for NAT networking...
==> server: You assigned a static IP ending in ".1" or ":1" to this machine.
==> server: This is very often used by the router and can cause the
==> server: network to not work properly. If the network doesn't work
==> server: properly, try changing this IP.
==> server: Setting the name of the VM: vagrant_server_1764054628955_79358
Vagrant is currently configured to create VirtualBox synced folders with
the `SharedFoldersEnableSymlinksCreate` option enabled. If the Vagrant
guest is not trusted, you may want to disable this option. For more
information on this option, please refer to the VirtualBox manual:
https://www.virtualbox.org/manual/ch04.html#sharedfolders
This option can be disabled globally with an environment variable:
```

## Проверка hostname в GUI

## Подключение по SSH

```
C:\work\dgavdadaev\vagrant>vagrant ssh server
==> server: The machine you're attempting to SSH into is configured to use
==> server: password-based authentication. Vagrant can't script entering the
==> server: password for you. If you're prompted for a password, please enter
==> server: the same password you have configured in the Vagrantfile.
vagrant@127.0.0.1's password:
Last login: Wed Sep  3 09:04:22 2025 from 10.0.2.2
vagrant@server:~$ su - dgavdadaev
Password:
Last login: Tue Nov 25 07:13:29 UTC 2025 on tty2
[dgavdadaev@server.dgavdadaev.net ~]$  
logout
vagrant@server:~$  
logout
Connection to 127.0.0.1 closed.

C:\work\dgavdadaev\vagrant>
```

Рис. 8: SSH вход под пользователем

## Выводы

---

## Итог лабораторной работы

---

В ходе работы сформирован образ Rocky Linux с помощью Packer, добавлен в Vagrant и использован для развёртывания виртуальной машины. Provisioning-скрипты автоматизировали назначение hostname и создание пользователя. Проверены корректный запуск VM, работа SSH и смена имени хоста. Лабораторный стенд подготовлен полностью и соответствует заданию.
